BEFORE USE, PLEASE READ AND FOLLOW ALL SAFETY RULES AND OPERATING INSTRUCTIONS

Important Safety Instructions

WARNING

To reduce the risk of fire, electrical shock, or injury when using your appliance, follow these basic precautions:

- Read all instructions before using the water dispenser.
- Never clean parts with flammable fluids. The fumes can create a fire hazard or explosion.
- Do not store or use gasoline or any other flammable vapors and liquids in the vicinity of this or any other water dispenser. The fumes can create a fire hazard or explosion.
- To avoid a hazard due to instability of the appliance, it must be fixed in according with the instructions.

INSTALLATION GUIDELINES:

- Remove the exterior and interior packing.
- Place your appliance on a floor that is strong enough to support the dispenser when it is fully loaded. The unit is provided with four plastic feet, if it does not sit level on the floor, adjust the front feet to level the unit well to the floor.
- Locate the appliance away from direct sunlight and sources of heat (stove, heater, radiator, etc.). Direct sunlight may affect the acrylic coating and heat sources may increase electrical consumption. Extreme cold ambient temperatures may also cause the appliance not to perform properly.
- Allow 2 inches of space between the water dispenser and the wall, which allows for proper air circulation to cool the compressor.

This water dispenser is not recommended for outdoor use.
- Do not locate the dispenser in area where the temperature may fall below freezing (32° F).
- Keep area around dispenser free of dust and dirt.
- Keep the reserve supply of water bottles away from excessive heat and light.
- Never unplug the water cooler, except for maintenance.

OPERATION INSTRUCTIONS:

Before Using Your Water Dispenser

- Before connecting the appliance to the power source, let it stand upright for approximately 2 hours. This will reduce the possibility of a malfunction in the cooling system from handling during transportation.
- The water dispenser is pre-cleaned at the factory but the reservoir and water lines must be flushed with fresh water before use as follows:
- Keep the unit unplugged.
• Fill water tank with tap water full to capacity. Wait for 5 minutes until water settles.
• Slide child safety button then push the hot water faucet until water comes out, then stop.
• Plug the dispenser into the electrical outlet. We are ready to complete the first cycle. In order to do that, wait for the hot water to reach temperature in approximately 10 minutes, and then wait for the cold to reach temperature (another 40 minutes, approximately).
• Unplug the dispenser from the electrical outlet. Proceed to drain the water from the faucets one at a time until no more water remains.
(Note: To facilitate this operation, use a large container).
• Then, drain any water left in the tanks by opening the drain plug located on the back, until it drains completely.
• Proceed to close the drain cap.
• Remove the cap from the 5-gallon bottle and use a clean cloth to wipe off the neck of the bottle.
• Place the 5-gallon bottle of water on the water intake, allow water to stand for approximately one minute.
• Push water faucet buttons to insure water flows from both faucets.
• Plug dispenser back into the electrical outlet.
• Now you are ready to use your water dispenser.

NOTE: Your water dispenser has been cleaned and sanitized before leaving the factory, but in case a taste problem develops, place two tablespoons of baking soda and add tap water. Fill water tank again and repeat basic operations previously outlined, except turn hot water function “OFF” to avoid leaving residues in hot water tank.

ATTENTION:
If you do not plan to use the water heating function for more than three days, we recommend that you turn off the hot water function.

OPERATING YOUR WATER DISPENSER

Steps To Replace Water Bottles
• Remove cap.
• Use a clean cloth to wipe off neck of bottle.
• Carefully lift bottle (approx. 40 lbs.) using your legs and not your back. Do not place hands on opening of bottle while placing in reservoir.
• Insert the water bottle on the water intake over reservoir opening so it settles properly on it.
• Wipe off any water which may have splashed on dispenser top.
• When a new bottle is installed you must open the hot water faucet and remove no less than 4 full cups of water to insure the water flows properly and the water reservoir is at the proper level.

TAKING DISPENSER OUT OR SERVICE
• If the water dispenser will not be used for a long period of time, unplug the power supply cord.
• Turn off the hot water.
• Drain the water through the faucets.
• Drain the water from tanks by drainage hole from the back of the dispenser.

CAUTION
• Do not use the bottle with any crack, leakage or holes.
• The back of the product should be put in shady places and kept away from wall and high-temperature elements. Please also put the product away from TV, video, or other
valuables.

- Do not turn on “heating” switch until water comes out of hot water faucet to prevent any damage on the heating tube.
- Do not turn on and off the “cooling” switch in three minutes to protect the compressor and extend the compressor usage life.
- During operation keep it beyond the children to avoid scald.
- Never turn on the heating switch when there is no water.
- When carrying it, the angle of inclination should be less than 45°.
- Adopt the ground wire to avoid any electric shock.
- In the process of using, check the water receptacle frequently. If the water receptacle is full, please pour the water out in time.
- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

- WARNING-Do not use mechanical devices or other means to accelerate the defrosting process, other than those recommended by the manufacturer.
- WARNING-Do not damage the refrigerant circuit.
- WARNING-Do not use electrical appliances inside the food storage compartments of appliance, unless they are of the type recommended by the manufacturer.
- WARNING-To avoid a hazard due to instability of the appliance, it must be fixed in accordance with the instructions.

**INSTALLATION INSTRUCTIONS:**

- In order to ensure the water dispenser with enough stability, users should follow below instructions to fix the unit:
  - 1. Remove one of the body rear’s screw (upper right corner or upper left corner) (Picture 1)
  - 2. Install a bracket where you have removed the screw already, fix the bracket tightening the removed screw on the right location(Picture 2)
  - 3. Fix the bracket on the wall side or similar object (if the wall side is too rigidity), you can make a hole by electric drill, then using expanded screw tightening the bracket (Picture 3)
  - 4. Children should be supervised to ensure that they do not play with the appliance.
  - 5. Household used only
6. Do not store explosive substances such as aerosol cans with flammable propellant in this appliance.
7. If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

MAINTENANCE
● Remove power plug or disconnect from the mains before performing any maintenance or servicing the product.
● Never use detergent or chemicals harmful to health to clean the water tanks.
● Do not directly spray water on the surface of the product.
● Wipe the front and back of the product with water-soaked soft cloth.
● If dust of other exterior substance has accumulated on the condenser, wipe off with water-soaked soft cloth.
● After cleaning the product, completely dry it. Fill the water to the tanks until waters comes out of the hot water faucet, then connect the electric power plug. If the surface of the electric heater in the hot water tank is deposited by water deposition, heating capacity will decrease. Fill hot water tank with aqueous solution of 2% nitric acid and keep for about two hours then cleaning. If the problems can not be solved, contact your dealer or the Service Center of our company.

TROUBLESHOOTING GUIDE
