Disposal after washing

- After using, please clean the lint and foreign materials of the lint filter and over flow filter in time. Otherwise it may influence your using the machine.
  - Please first pull off the power plug from the receptacle before cleaning.

Cleaning the lint filter

- The lint filter must be used during washing
  - It must be cleaned in time after each using.
  - 1. Take off the lint filter
  - Put hand at the indicated position.
  - Push down to take off (See to Figure 1)
  - 2. Clean the lint
  - Put it in water and clean while it is still wet. (See to Figure 2)
  - 3. Install the lint filter
  - After cleaning, insert the bottom of the lint filter (marked with “top side”) into the over flow filter, then push the upper part of the lint filter in (marked with "up side"). (See to Figure 3)

Cleaning the overflow filter

- 1. Take off the corruption pipe
  - Dismantle the upper part of the corrosion pipe inside the overflow filter (as indicated in Figure 1)
  - 2. Cleaning the overflow filter
  - Clean the lint around the filter and clean the filter. (See to Figure 1)
  - 3. Install the overflow filter
  - (a) Insert the corruption pipe.
  - (b) Insert the mounting plate at the bottom of the lint filter into the valve cover.
  - (d) Insert the outlet pipe at the bottom of the lint filter into the valve cover.
  - (e) Hang up the hook at the left upper side.
  - (f) Push the upper part in as indicated in Figure 2.

Disposal of the complete unit

- The transport box and packing material can be recycled. Please dispose of it at the proper place.
- The power cord should be hung after each using.
- Do not stores water in the tub for long period. Otherwise it will affect the working efficiency of the machine.
- Do not use the original packing material to store water.
- Do not use water drops on the surface and inside the tub with clean cloth.
- Do not wash the lint filter and the circle/cover of the spin tub (See to Figure 4). Please clean them immediately after each using.

Trouble-shooting Answer to question

If the laundries fall to the outer side of the spin tub

Trouble-shooting Answer to question

If the laundries fall to the outer side of the spin tub, please take them out immediately.

When the remained water is frozen

- Prevent the freezing/size to discharge the water completely after using.
- After complete draining, set the “WASH SELECTOR” at “STRONG” or “STANDARD”. If it is set at “DRAIN”, it will be rather difficult for the frozen water to drain.

When the water is frozen

Pour hot water below 50°C into the wash tub to soak it completely. Then turn the pulsator with hands gently. Please confirm the drainage can work normally before next using.

Trouble-shooting Answer to question

When the laundries quantity is a few, please use “Standard” wash speed. If use “Strong” wash speed, it may splash.

Rinse with water-filling

1. Put the laundries into the wash tub. Select suitable wash speed according to the laundries.
2. Adjust the water level. Set the water level with water level adjusting lever according to the laundries quantity. Then fill suitable water continuously.
3. Rinse

Adjust the wash timer to 2-3 minutes to do rinsing.

Rinse with stored water

1. Put the laundries into the wash tub. Select suitable wash speed according to the laundries.
2. Fill water to preset water level.
3. Rinse

Adjust the wash timer to 2-3 minutes to do rinsing.

Trouble-shooting Answer to question

• When the laundries quantity is a few, please use “Standard” wash speed. If use “Strong” wash speed, it may splash.

Spinning

1. Put the laundries into the spin tub evenly and smoothly.
2. Please the gland in the tub properly. Close the inner and outer cover of the spin tub.
3. Spin

Select suitable spin time according to the laundries, and do spinning.

During spinning, if there’s abnormal sound, it is generally owing to starting placement of the laundries. Please stop the machine and re-order the laundries.

• In spinning, it will cause the work if you open the outer cover of the spin tub. Close it to resume the spinning.

To do spinning and cleaning or rinsing with water-filling together, please first do spinning for around 1 minute, then do draining or rinsing with water-filling. Otherwise the spinning will stop owing to too much water stored in the spin tub.

When the laundries quantity is a few, please use “‘Strong” wash speed. It may splash.
Names of the parts

Safety precautions

Installation and adjustment

Usage of the drain hose

Midway spinning

Pour water into the water filling entrance and start the panel directly (pump runs automatically until the water level reaches the max. mark)  

1. Put the laundries into the spin tub evenly and smoothly.  
2. Spin (a) Put the gland in properly. Please put in the gland properly even if the laundries quantity is small.  
3. Do not decompose, repair or alter the machine by yourself.  

Installing the lint filter

The drainage shall be smooth with the drain hose.  

1. The height of the drain hose shall be less than 10cm, or the drainage shall not be smooth and cause incomplete drainage.  
2. Do not wrap or press the drain hose.  
3. If the drain hose is too long, cut it at mid point. To make enough drainage, cut the excess of the hose shortening.  
4. If extra drain hose is needed, please make separate purchases. The inner diameter of the extra hose shall not be less than 30mm, and the length shall not exceed 1.5m.  

If the extra hose is too long, cut it at point A/B/C.

Usage of the drain hose

The installation position of the drain hose.

The drain hose is extended from the rear of the washing machine.

The drain hose may not be installed properly along the groove at spin tub side.

Usage of the detergent

How to use the washing powder

1. Fill water to the desired level. Glue the washer with plain water.  
2. Add detergent. Run for 30 seconds to dissolve it completely.  
3. Put the laundries. Select suitable washing program.  
4. Add powder while stirring to fully dissolve it.  
5. The powder is more prone to damage the laundries than the detergent. Therefore please use with proper mixing.  

Washing sequence

1. Water filling

(a) Set 45 sec to "Water fill" (Figure 4). (b) Adjust spiral to a position as needed.  
2. Fill water and add dissolved powder detergent until water reaches a suitable level.  
3. Begin to wash and change detergent uniformly.  
4. After the washing, the laundry is dried, and supplement water is necessary.  
5. Select the washing time Select the washing time according to the laundries (Figure 4).  
6. Add foam-removing spinning. Please check if the water inlet hose has good working condition before using to guarantee your safety.

Meaning and description of the symbols

Warning sign

Contents marked with this symbol are related to the safety of the product and the personal safety of the users. Please observe in strict conformity to the contents, otherwise it may cause damage of the machine or injure the personal safety of the users.

Forbidding sign

Contents marked with this symbol are actions forbidden to perform. Performing of these actions may cause damage of the machine or injure the personal safety of the users.

* Please check if the power receptacle has good earthing condition before using to guarantee your safety.

Installation hole accurately you can lean the fixing hook for 90°. Take off the fixing hook for 90° (as per Figure 4).

Figure 4

Check if the laundries are applicable for washing in machine.

Pour the water and let the water filling entrance and start the panel directly (pump runs automatically until the water level reaches the max. mark).  

Push the gland, the laundries are washing.  

Pour the water filling entrance and start the panel directly (pump runs automatically until the water level reaches the max. mark).
